

Solve each problem.

1)  $\frac{1}{3} - \frac{1}{9} =$

2)  $\frac{2}{5} + \frac{1}{4} =$

3)  $\frac{5}{7} - \frac{2}{6} =$

4)  $\frac{7}{9} + \frac{6}{8} =$

5)  $\frac{4}{5} - \frac{2}{4} =$

6)  $\frac{3}{6} + \frac{3}{7} =$

7)  $\frac{1}{2} - \frac{2}{8} =$

8)  $\frac{4}{6} + \frac{1}{3} =$

9)  $\frac{5}{7} - \frac{2}{3} =$

10)  $\frac{7}{10} + \frac{5}{9} =$

Solve each problem.

1)  $\frac{1}{3} - \frac{1}{9} = \frac{3}{9} - \frac{1}{9} = \frac{2}{9}$

2)  $\frac{2}{5} + \frac{1}{4} = \frac{8}{20} + \frac{5}{20} = \frac{13}{20}$

3)  $\frac{5}{7} - \frac{2}{6} = \frac{30}{42} - \frac{14}{42} = \frac{16}{42}$

4)  $\frac{7}{9} + \frac{6}{8} = \frac{56}{72} + \frac{54}{72} = 1\frac{38}{72}$

5)  $\frac{4}{5} - \frac{2}{4} = \frac{16}{20} - \frac{10}{20} = \frac{6}{20}$

6)  $\frac{3}{6} + \frac{3}{7} = \frac{21}{42} + \frac{18}{42} = \frac{39}{42}$

7)  $\frac{1}{2} - \frac{2}{8} = \frac{4}{8} - \frac{2}{8} = \frac{2}{8}$

8)  $\frac{4}{6} + \frac{1}{3} = \frac{4}{6} + \frac{2}{6} = 1\frac{0}{6}$

9)  $\frac{5}{7} - \frac{2}{3} = \frac{15}{21} - \frac{14}{21} = \frac{1}{21}$

10)  $\frac{7}{10} + \frac{5}{9} = \frac{63}{90} + \frac{50}{90} = 1\frac{23}{90}$

Answers

1.  $\frac{2}{9}$

2.  $\frac{13}{20}$

3.  $\frac{16}{42}$

4.  $1\frac{38}{72}$

5.  $\frac{6}{20}$

6.  $\frac{39}{42}$

7.  $\frac{2}{8}$

8.  $1\frac{0}{6}$

9.  $\frac{1}{21}$

10.  $1\frac{23}{90}$
